**IDEM**

# A new digital identification and knowledge system built for CNC tools

## Talk to your tools

The Idem system can recognize every tagged tool in your workshop. Within seconds you can access product data, compatibility checks and online support - right in the mobile app.

## Optimize for variety

The Idem system simplifies jobs that use complex tool and supplier combinations. The system quickly tells you what tools work with what parts and systems. This reduces faulty assemblies and saves you time.

## Build the future

The Idem team comes with decades of experience in CNC machining for some of the world's leading factories. We bring that knowledge and expertise to our community in partnership with a wide variety of products and manufacturers.

Let's bring the Industry 4.0 dream to life, today.

### The Tag

Pea-sized RFID tags are attached to tools that link our extensive database.

### The Reader

Our wireless reader is compact enough to scan tags everywhere anytime.

### The App

The mobile app displays the tool information you need and the online support you want.
